4	Brief Description of Work	The Community Managed Water Supply Schemes namely Ayyapankkavu WSS, Janapriya WSS, Gandhi WSS and Perumpara WSS under Kongad Grama Panchayath are designed to provide sustainable and reliable drinking water supply to the beneficiary households. At present, these schemes are in partially functional condition due to various deficiencies such as failure and deterioration of pumping mains, reduced hydraulic efficiency of existing pump sets, inadequate discharge and head, and leakage issues in storage tanks. The damaged pumping mains have resulted in insufficient conveyance of water, while the poor performance of pump sets has affected the required system pressure and reliability. Leakage in storage structures is also causing avoidable water loss and adversely affecting the overall efficiency of the schemes. In order to restore all the above schemes to their designed operational parameters and to ensure sustainable and uninterrupted water supply, the proposed works include replacement of damaged pumping mains with new pipelines of suitable specifications, supply and installation of new energy-efficient pump sets, and associated testing and commissioning works. The proposed improvements are essential for enhancing system performance, reducing water losses, and ensuring effective service delivery to the beneficiary households under all four schemes.project cost 2177915/-
